

The Future of Cell & Tissue Regenerative Healing

To whom it may concern:

Hello! I am Ed "Too Tall" Jones, former Dallas Cowboy and Super Bowl Champion. By the end of my 15-year career with the Cowboys, I had a total of 106 sacks. I participated in 16 playoff games including three Super Bowls and was a member of the famed Doomsday Defense squad of the 1970's and 80's. This former NFL player knows what it is like to deal with chronic pain.

I am excited to introduce the **Phoenix Thera-Lase Systems**, which has taken non-invasive, high-powered laser systems to a new level of positive patient outcomes...this is the future of cell and tissue regenerative healing greatly reducing injury recovery time naturally. This patented technology is far more powerful than the competition, and delivers up to five times the penetrating wavelength. The Thera-Lase Systems are non-invasive, drug-free treatment solutions that provide relief from both acute and chronic pain, while accelerating healing, and simultaneously reducing inflammation related to soft-tissue injuries.

During the last two years, I have personally received treatments using the Phoenix Thera-Lase to alleviate lower back pain and experienced immediate relief with no downtime. I can honestly say Phoenix Thera-Lase is one of the best laser treatments available to successfully combat pain without surgery, and I encourage you to speak to me about this technology or reach out to the developer and CEO, Gary Bellinger at (469) 567-3959 to learn more about **Phoenix Thera-Lase Systems**. Additional case studies and white paper is available online at [www.phoenixthera-lase.com](http://www.phoenixthera-lase.com)

Sincerely,

A handwritten signature in blue ink that reads "Ed Jones".

**Ed Jones**
