

August 30, 2019

I've been incorporating the Phoenix Thera-lase system into my standard of care for post-operative patients for the past two years. I use it to help decrease post op swelling and adhesions, improve scar management and increase muscle healing in calves for post op patients.

Using this treatment in the appropriate sessions, patients see immediate relief with little to no pains. The increase in blood circulation helps to reduce the inflammation of acute athletic injuries.
